

On the Subject of Macro Memory

Memory is... uh... mem- memory is fra.. fragrant? No, fragile. Memory is fragile and... where was I again? Oh yes, always pay attention.

- One of the present modules will activate, showing a number in the display.
- Use the displayed digit to determine the correct button, which may be on any module, and press it to advance the stage of the active module.
- Complete all stages of a module to disarm it. A disarmed module may not activate again. However, a button on a disarmed module may be the correct button to press.
- Correct presses are committed to the memory of each present module. Incorrect presses reset all unsolved modules to stage 1 and clear their memory of previous activations.

Stage 1:

1. Press the button in the first position of the active module.
2. Press the button labelled "2".
3. Press the button on the active module that is in the same position as the button labelled "3".
